

TauApp 2.0

The new frontier of TAU control and configuration

TauApp 2.0 is a professional application for installers that enables full automation management directly from your handheld device. A simple and intuitive interface guides you step-by-step through your configurations. Available for Android, iOS, and PC.

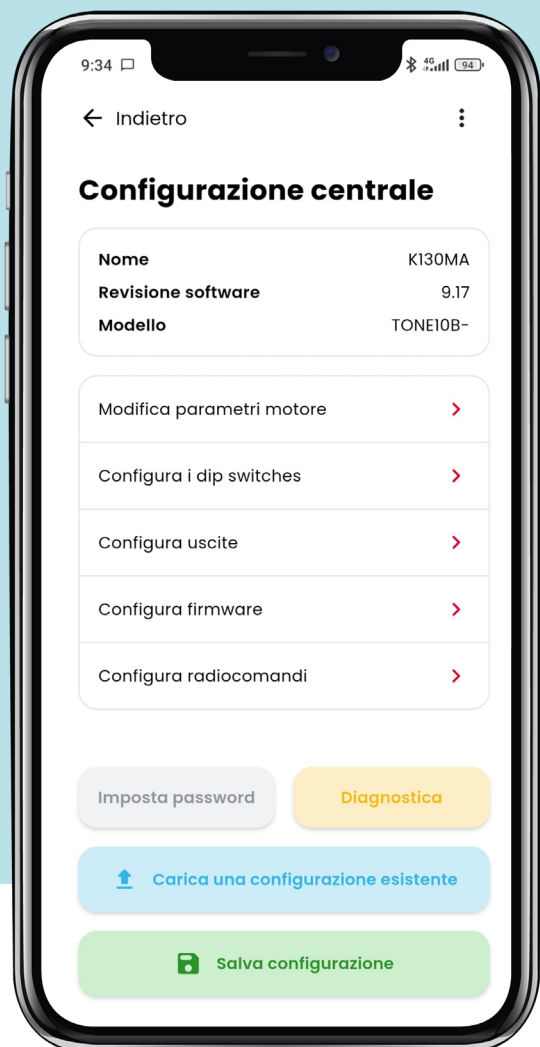

What is it for?

It is used to check diagnostics, modify TAU product parameters (speed, times, logics), lock and password-protect the control unit, and update the firmware without having to physically access the control unit.

Furthermore, it enables the organization of transmitter code memories and offers the option to lock access to memories via password, guaranteeing maximum security for the customer on one hand, and total protection over the sale and management of transmitters on the other.

TAU CLOUD SERVICE

Through TAU's CLOUD service, it is possible to save a backup copy of the radio memories and control unit configurations already saved on your device to the server. This is useful in the event of loss, breakage, or replacement of your smartphone or PC.

What functions does it have?

Through the "Control unit configuration" page, it will be possible to:

1. View the name, software version, and selected motor model of the connected product;
2. View product diagnostics;
3. Modify motor/motors parameters;
4. Configure virtual dip switches;
5. Configure outputs;
6. Configure firmware;
7. Configure transmitters;
8. Set a password to protect the product;
9. Save the configuration of the newly installed product;
10. Load a product configuration previously used in the past.

BLUEWAY

P-250BLUEWAY

NEW

Multi-function interface that connects the TAU control unit with the smartphone. Through the installed TauApp 2.0, it will then be possible to configure and manage control unit operations and transmitter codes.

QUICK AND EASY CONNECTION:

To connect the BLUEWAY to the control unit, a cable with a customized connector will be used.

BLUETOOTH CONNECTION VIA SMARTPHONE OR COMPUTER to create and program SM memory cards and virtual transmitters directly in the office, ready to be installed or delivered to the customer fully operational.

COMPATIBILITY TABLE WITH TAU CONTROL UNITS

Scan the QR CODE to see which control units and from which firmware version they are compatible.
